

## Configuration & Migration

---

When data is migrated between servers running the same platform the process is usually straightforward and problems are minimal. However, in cases where data is being migrated between different platforms, the process gets more complicated.

---

### Build and Configuration Solutions

Having configured thousands of servers and network storage solutions for top-brand customers, we can help you build and configure your systems to eliminate hassles and save you precious time.

Simply provide us with your specification and we will build and test your systems, ready to add directly into your existing infrastructure.

We'll build your systems configured to order based on your specifications, help upgrade existing, or simply consult on the best configuration to address your needs. If you don't have the time or expertise available, we can deploy it on-site too.

### Migration Services

Our professional engineering group eliminates the hassle of server migration. So whether you are standardising your network and need to migrate data between server platforms, are moving to a cloud or hybrid setup, or simply migrating within a specific vendor line, using our server migration services ensures a timely, risk-free server migration process.

We specialise in all leading Tier One server brands including HPE, Dell & IBM. We can offer fully virtualised environments; build/convert systems to work in a virtualised environment using any of the leading solutions (Hyper-V, VMware).

### Key Points

- Servers from all major manufacturers (HP, Dell, IBM)
- Network storage solutions including SAN/ NAS boxes and enterprise tape library backup solutions
- All major OS - Windows Server, OpenVMS, Unix, Linux
- Post-migration data verification
- Automated tools cut migration and configuration times
- Microsoft Azure, Amazon and Google cloud solutions available
- Virtualised environments
