

## ITAD Management

---

Our secure IT Asset Disposal services include complete asset management, inventory collation and IT asset disposal, which are both mobile and cost effective. As a fully WEEE certified company with a hazard waste disposal license, our primary objective is to refurbish and resell as much of this equipment as possible, with very little going to waste.

---

### Hard Drive Shredding

Our hard drive destruction services provide the mechanical destruction needed to securely dispose of your storage media. The process is safe, efficient and data protection and GDPR compliant. Our high specification machinery is mobile so we can either come to your offices, offering hard drive shredding on-site or alternatively we can securely collect your data in our vehicles and shred at our offices.

### Secure Data Destruction

With ICC's sophisticated data destruction service using licenced software, which is CESF approved to IL6 security level, we can ensure your sensitive hard drive data is destroyed and completely unrecoverable. Before wiping, all serial numbers are recorded, then a certificate of destruction will be produced for each unit. Hard drives are then removed from site and resold, producing zero landfill.

---

### Decommissioning & Upgrading

Our security cleared engineers will take full management control of the decommissioning project, providing the expertise and know-how to remove your old IT equipment and providing a tailored IT upgrade, with reduced costs, by trading in old for new.

We recycle redundant PCs, laptops, monitors, servers, network products, printers, EPOS, scanners, UPS, Cabling, AV equipment, projectors, telephones, mobiles and fax machines.

In most cases your equipment will actually have a residual value to us, allowing us to recover our costs and reimburse you either as a credit against new technology or as a bank transfer. This is also an environmentally friendly route, keeping waste to a minimum.

---

### Key Points

- Mobile service - on-site or off-site
- Environmentally friendly & sustainable recycling service
- Security vetted engineers
- ISO and Safe Contractor Accreditations
- Partnered with tier-1 vendors
- Best prices paid for old assets or trade against new technology
- Data protection and GDPR compliant
- Tracked and secure vehicles
