

Professional Services

We have a range of professional services offerings that are designed to help your business realise the full potential of its technology systems. We have the experience, know-how and most importantly the resources to develop solutions to meet the needs of your organisation.

Our IT consulting team offer a wealth of industry leading knowledge and technology experience. We invite you to take advantage of our professional services expertise, with the assurance that you can count on our objective, unbiased advice.

Some of the many recent projects our consultants have been involved in include OpenVMS, HP-UX and Microsoft best practices, upgrades and migrations, including system management, performance and security; virtualisation and thin client system design (including ROI, performance gains and business benefit reports); NAS & SAN configuration and implementation strategies.

We offer reports on performance of select storage and servers along side our audit service. This allows you to stay on top of all the individual components that are contributing to running your business.

Our vendor comparable professional services include health checks, performance testing, system configuration, new or refurbished hardware installation, system migration and upgrades.

We offer a range of service levels providing either entry level engineers, senior engineers or senior technical specialists to suit your specific technology requirements.

Key Points

- System/network management, upgrades and technology roadmaps
- Network infrastructure analysis - including design, installation, maintenance and protection
- NAS & SAN configuration and implementation strategies
- Virtualisation, cloud and thin client system design
